Season Overview

A compact executive page for the selected season.

Storytelling read

The 2024-25 season is the clearest sporting rebound in the sample: 90 league points, a top-four finish, and positive net P/L.

Why this visual works

The page combines season KPIs, points by era, competition outcomes, and a summary table so the reader can move from headline to audit detail quickly.

Match Performance

Performance quality split by opposition and venue.

Storytelling read

The overall record improves sharply, but the Top-6 comparison keeps the story honest: elite opposition remains the hardest ceiling.

Why this visual works

Goal trend, opponent-strength buckets, and W/D/L venue mix show whether results are broad-based or dependent on easier fixtures.

Financial Sustainability

Revenue, cost, profitability, and wage pressure.

Storytelling read

BlueCo revenue growth is visible, but cost growth and wage-to-revenue pressure keep sustainability as the key risk.

Why this visual works

Grouped columns and the wage/revenue line separate raw scale from financial discipline, which is the actual portfolio signal.

Money Flow

Where income becomes operating result.

Income to Outcomes Flow

Staged view: revenue streams to gross profit, operating costs and final result

REVENUE STREAMS

Broadcast
£932m

Commercial
£826m

Matchday
£343m

Player Sales
£280m

Competitions
£278m

£-228m

Operating Costs
£489m

Staff £224m
Ops £141m
Academy + Mktg £124m

Net Loss
£-228m

● Revenue inflow

● Profit flow

● Cost outflow

Storytelling read

The Sankey makes the financial story immediate: broadcast and commercial income are large, but direct player costs dominate the flow to net loss.

Why this visual works

This custom HTML visual turns an accounting table into a readable flow from revenue streams to gross split, operating costs, and final result.

Transfer Activity

Investment map, balance, and top fees.

Squad & Wages

Contract efficiency and wage pressure.

Storytelling read

The page reframes wages as efficiency: high cost per appearance flags contracts that consume budget without matching availability.

Why this visual works

The wage trajectory gives the macro view; cost per appearance and conditional colors turn player-level contracts into action-oriented signals.

Player Market Value

Squad asset growth and ranking shifts.

Storytelling read

Palmer's rise is the signature asset story, while the valuation trend shows how the squad value base changes across seasons.

Why this visual works

Area, ranked bars, and the ribbon-style movement view combine total value, individual assets, and rank dynamics in one page.

Player Performance

Production, quality, and player-level detail.

Storytelling read

Goal contributions show attacking reliance, while the rating trend and table keep the visual story grounded in granular player data.

Why this visual works

Stacked contribution bars, a season rating trend, and a formatted detail table serve different audiences: story, trend, and audit.

Semantic Model Snapshot

Multi-fact star schema and relationship visibility

Modeling signal

Multiple fact tables connect to shared dimensions for season, player, competition, and calendar.

Layout strategy

Separate model layout pages keep relationship paths readable across a larger semantic model.

Portfolio signal

The report is backed by clear grain, fact/dimension separation, and governed measures.

Fact Layouts & DAX Organization

Measure folders, prefixes, and advanced DAX patterns

DAX table order

All measures live in a dedicated DAX Measures table, organized by report area and visual purpose.

Naming conventions

Prefixes clarify intent: REF for helper text/colors, # for counts, % for rates, \$ for money, VIS HTML for custom visuals.

Advanced patterns

Measures use CALCULATE, SWITCH(TRUE), VAR/RETURN, RANKX, TOPN, MEDIANX, AVERAGEX, ALLSELECTED, DATEADD, DATESYTD, and DIVIDE.
