03

Mountain-200 Black, 38

\$2,2M

5,1% of revenue

STORY SIGNAL

2024 revenue reached \$43.7M, up 38.2% versus prior year, while the page makes concentration explicit: Southwest and Bikes carry a disproportionate share.

READ

- The variance bridge decomposes the \$12.1M increase by region instead of stopping at the headline change.
- The monthly line shows the shape behind the annual result, including mid-year and year-end peaks.
- The category ranking and leaders panel anchor the story in concrete names, values, and revenue shares.

DESIGN DECISION

Compact HTML KPI cards combine value, comparison, and status. Gold, blue, green, and red are reserved for hierarchy and decision signals rather than decoration.

FILTER CONTEXT SHOWN

Year 2024; all categories, regions, and channels.

Regional Performance

Where revenue sits, who carries scale, and who beats plan

STORY SIGNAL

Scale and accountability are different stories: Southwest leads revenue, Germany leads normalized attainment, and Southeast is the visible laggard at 87.0%.

- READ**
- The country map establishes geographic footprint without competing basemap labels.
 - Actual versus target bars preserve absolute commercial scale and expose each regional gap.
 - The attainment ranking normalizes performance; gold leads, red trails, and blue carries the middle ranks.
 - The scorecard supplies exact values and the Region field needed for drillthrough.

DESIGN DECISION

Geography is used because location is the question. Exact numbers, absolute comparisons, and normalized rankings sit together so no single visual overclaims the story.

FILTER CONTEXT SHOWN

All years, categories, regions, and channels.

INTERACTION STORY

Hover answers the next question without leaving the map; drillthrough converts a selected Region into a scoped analytical page.

TOOLTIP

- Canada hover context returns \$16.4M revenue, 17.1% YoY growth, and a rolling 12-month mini-trend.
- The tooltip supplies context on demand without adding permanent chart ink to the map.

DRILLTHROUGH

- Select a Region data point, then use View Territory Detail.
- The target binding uses the exact dim_territory[Region] column and preserves compatible source filters.
- The destination provides a Back action to return to the analytical flow.

780	Mountain-200 Silver, 42	\$481,127	350	7.9%
784	Mountain-200 Black, 46	\$414,885	296	10.7%

How this territory buys

Online vs reseller revenue share by year

FILTER CONTEXT SHOWN

Drillthrough context: Canada; source filters preserved.

STORY SIGNAL

Canada contributes \$16.4M, grows 17.1% year over year, and reaches 118.8% of target, but its 2.5% margin shows that growth and target attainment do not equal profit quality.

READ

- The monthly trajectory preserves continuity with the Executive Summary trend.
- Road Bikes dominate the selected territory's product mix.
- The Top-15 product table combines bestsellers, units, and margin for concrete follow-up.
- The normalized channel mix connects the territory back to the channel-margin story.

DESIGN DECISION

Drillthrough passes the exact dim_territory[Region] context. The destination combines scoped HTML cards, Top-N measures, a back action, and the same color semantics used across the report.

REGIONAL SALES PERFORMANCE

Storytelling quick look - report pages, interactions, and semantic model

5/12

Product and Margin Drivers

Self-service decomposition with a fixed profitability audit

STORY SIGNAL

Bikes produce \$94.7M of revenue, led by Road Bikes at \$43.9M, but bestseller status does not guarantee profitability: red margin values expose value-destructive SKUs.

READ

- The decomposition tree lets the reader choose the explanatory path across category, subcategory, region, product, and channel.
- The fixed subcategory ranking gives a fast read for viewers who do not interact with the tree.
- The product table closes the loop with revenue, units, and margin at SKU level.

DESIGN DECISION

Interactive root-cause exploration is paired with stable evidence. Rank-driven bar colors and red negative-margin font formatting direct attention without turning the whole table into a heatmap.

Revenue Trend and Seasonality

One metric switch, three complementary time lenses

Channel Margin Story

Revenue scale is separated from profit quality

STORY SIGNAL

In 2024, Reseller generated \$32.9M - 3.1 times Online revenue - but at a -2.9% margin, while Online delivered \$10.8M at a 40.0% margin.

READ

- The combo chart puts revenue columns and margin-rate line in one declared volume-versus-quality decision.
- Category bars show exactly where reseller margin moves left of zero, led by Bikes.
- The normalized mix shows channel drift independently of total revenue growth.
- The two-row economics table makes the AOV and margin trade-off auditable.

DESIGN DECISION

The dual axis is deliberate because the units differ and serve one decision. Negative margin is never hidden, and the HTML cards summarize both channel engines plus their trade-off.

FILTER CONTEXT SHOWN

Target gaps: action list

Worst variance first - comparable target period only

Region	Revenue	Target	Variance
Northeast	\$778,377.79	\$1,098,225	(\$319,847)
Canada	\$2,389,120.60	\$2,397,685	(\$8,564)
Central	\$955,864.73	\$953,329	\$2,536
Southeast	\$875,604.21	\$802,562	\$73,043
Southwest	\$3,966,506.68	\$3,462,822	\$503,684
France	\$1,664,041.62	\$836,326	\$827,716
Germany	\$1,548,206.97	\$521,772	\$1,026,435
United Kingdom	\$2,084,356.96	\$921,836	\$1,162,521
Northwest	\$2,994,492.87	\$1,563,320	\$1,431,173
Australia	\$2,751,945.92	\$1,178,331	\$1,573,615

STORY SIGNAL

2025 attainment is 145.7% overall, but only 8 of 10 regions are on target. Northeast carries the largest miss, and category-level red cells reveal where intervention is needed.

READ

- The Region-by-Category matrix uses green, amber, and red as operational status, not decoration.
- The action table sorts dollar variance worst first so the reader moves from status to accountable gap.
- The top cards distinguish revenue scale, plan attainment, and breadth of regional coverage.

DESIGN DECISION

A virtual TREATAS relationship allows Category columns to filter target data even though fact_targets has no physical product relationship. Missing targets remain blank rather than implying zero performance.

FILTER CONTEXT SHOWN

Year 2025; all categories, regions, and channels.

Semantic Model Overview

A dual-fact design supports sales behavior and comparable target accountability

MODEL STORY

The model separates transactional sales from monthly planning while keeping shared Date and Territory dimensions as the analytical spine.

CONSTRUCTION

- `fact_sales` holds order-line revenue, cost, margin, quantity, customer, product, channel, territory, and date grain.
- `fact_targets` holds monthly Territory-by-Category targets and connects physically to Date and Territory.
- The Category target comparison uses TREATAS rather than an ambiguous physical relationship to `dim_product`.
- Metric selector is intentionally disconnected; the formulas table centralizes 81 reusable measures.
- Eight relationships are defined, including one inactive Customer-to-Territory path to avoid ambiguous filtering.

WHY THIS MODEL WORKS

A conventional sales star makes the report easy to audit: each slicer belongs to a dimension, while calculations aggregate from one transaction fact.

DATE

Daily calendar plus MonthStart, YearMonth, English month labels, and explicit sort columns.

PRODUCT

Category, product line, subcategory, product, price, cost, and color support mix and margin analysis.

TERRITORY

Continent, country code, and Region support map, rankings, tooltip, and drillthrough.

CUSTOMER

Customer and segment enable commercial-grain extension without embedding attributes in the fact.

CHANNEL

A compact Online versus Reseller dimension powers the margin-quality narrative.

Measure Architecture

Folders and prefixes turn 81 DAX measures into a maintainable analytical API
